Sequence 5178, Application US/09134001C
Patent No. 6380370
GENERAL INFORMATION:
APPLICANT: LYMIN DOUGETE-Stamm et al APPLICANT: LYMIN DOUGETE-Stamm et al TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS TITLE OF INVENTION: DEPDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: UNMER: US/09/134,001C
CURRENT FILING DATE: 1997-08-13
PRIOR APPLICATION NUMBER: US 60/055,779
PRIOR FILING DATE: 1997-11-08

Sequence 1, Application US/08353700;
Patent No. 559919
GENERAL INFORMATION:
APPLICANT: YEN, TIMOTHY J.
APPLICANT: PEN, TIMOTHY J.
TITLE OF INVENTION: NUCLEIC ACID ENCODING A
TITLE OF INVENTION: TRANSIENTLY-EXPRESSED KINETOCHORE PROTEIN,
TITLE OF INVENTION: AND METHODS OF USE
TITLE OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: DANN, DORFWAN, HERRELL AND SKILLMAN
STREET: 1601 MARKET STREET, SUITE 720
CITY: PHILADELPHIA

1,Title: Fatty acylation of two internal lysine residues required for the toxic activity 1,Reference number: A55387; MUID:95099325; PMID:7801126
1,Contents: annotation: lysine palmitcylation
1,Note: lysine modification is performed by the hlyC gene product
1,Haartlein, M.; Schiessi, S.; Wagner, W.; Rdest, U.; Kreft, J.; Goebel, W.
1, Cell Biol. 22, 87-97, 1983
1,Title: Transport of hemolysin by Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A, Description: attacks blood cell membranes and causes cell lysis
C; Superfamily: hemolysin A; hemolysin A homology
C; Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipoprotein; tandem repeat;
F; 246-791/Domain: hemolysin A homology <HLYA>
F; 723-851/Region: 9-residue repeats (G-X-K-GIN)-D-X-[LVIYF]-X)
F; 563,689/Binding site: palmitate (Lys) (covalent) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ,Molecule type: DNA
